

## OVERVIEW DATASHEET

# Simplify Digital Transformation. Turn Data Into Actionable Insights.

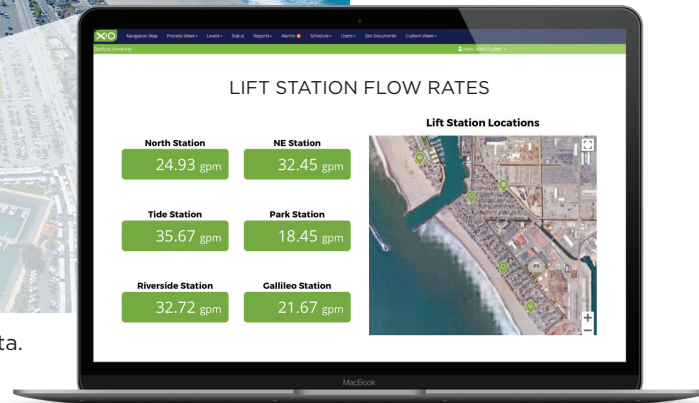

**XiO's data services and analytics solution enables water utilities to harness value from data and optimize operations.**

- Robust and secure platform built for critical infrastructure
- Combine siloed data from legacy SCADA systems and IIOT devices
- Integrate and share data from multiple sources via APIs
- Powerful analytical AI and ML applications deliver quick ROI
- Enable system-wide visibility, implement asset management, reduce nonrevenue water, automate regulatory reporting, and improve security
- Ideal for distributed systems and multi-site remote operations

Gather system-wide insight from your data.

## Data Services And Analytics Solutions

### Visibility, Resiliency, Redundancy

- Monitor legacy SCADA systems
- Reduce nuisance or false alarms with sophisticated correlation alarms
- Rely on real-time cloud-based system and data backups

### System Modeling

- Establish digital twins for system modeling

### Optimization

- Drive resource efficiency and decarbonization efforts
- Establish and integrate asset management
- Develop predictions through artificial intelligence (AI)
- Improve decision-making utilizing machine learning (ML)

### Industrial Control

- Automate robust process control solutions
- Expandable and extensible across wide geographic regions

### Multi-System Operation

- Manage multiple systems from a single dashboard
- Reduce operator training and mistakes

### Data Publishing

- Integrate data from drinking water, storm water, wastewater treatment, and sewer collection systems into one system
- Leverage public data sets to create dynamic system models
- Drive transparency and foster public engagement
